## Experiment - 2

### Topology Objective

### Topology

### Procedure

Step 1: Place 2 generic PC's and 1 generic router  
 Connect both PC's to the router's Fast ethernet  
 Ports using copper crossover wire.

Step 2: Select PC1 config -> Fast ethernet 0 set IP  
 Address as 10.0.0.10 and default gateway  
 10.0.0.1. Similarly for PC2 IP 20.0.0.10  
 and default gateway 20.0.0.1

Step 3: Select router & go to CLI  
 Execute the following commands

> enable

# config terminal

# interface fast ethernet 0/0

# no shutdown

# exit

Notice PC0 & router 0 are successfully connected now  
 run for PC1

# interface fastethernet 1/0

# ip address 20.0.0.1 255.0.0.0

# no shutdown

PC1 is also <sup>successfully</sup> ~~successfully~~ connected.

Step 4: Select PC0 → Desktop → Command Prompt

~~Run~~ Ping PC1 by running command

→ Ping 20.0.0.1

Observe the output

Observation:

PC0 successfully ~~ping~~ ping PC1 with 32 bytes of data
