Objective :-
Configure Web Server, DNS, within a LAN

Topology

Procedure :-
-> Place an end device a server & a switch & connect
them using copper straight wires
-> Assign the IP address as demonstrated in topology
-> To set the IP of the server
    -> goto config
    -> Select DNS method, turn it on & add a resource
    -> set IP address ; make sure port is ON
    -> Select HTTP.
    -> Turn the services to on
    -> ament the content of the code as needed &
     click on it
    -> select the PC -> Destop -> web browser
    -> Enter the URL specified in the DNS resource

Observations
-> The server's web Page could be successfully
accessed from the PC by entering the respire URL
-> The DNS server could hence be configured within
a LAN by enabling the DNS
